

MicroClean II System Filter Care

- MicroClean II filters are used in all 880 Sundance Spas from 2006 +
- MicroClean II filters have a life expectancy of anywhere from 6-9 months depending on use.
- Baqua Spa: For tubs on the BaquaSpa chemical system, spa performance will be greatly increased by remove the filter and rinsing with a hose on a monthly basis
- Nature II/Chlorine: For tubs on the nature II/chlorine (or bromine) system, the filter should not need to be rinsed.

Removal

1. Turn off power to tub.
2. Remove the filter lid.
3. Remove any debris from the filter compartment. (This is important because if debris finds it's way into internal plumbing, blockage could result).
4. Loosen the filter nut
5. Remove the filter.
6. **DO NOT** reuse the old filter for any reason.
7. Install new filter, then tighten filter nut until it just touches filter face.
8. **Caution: Do not over-tighten filter retainer!**
