

TRI-X Filter Care For Hot Spring tubs

- Tri-X filters come standard on all 2006+ Grandee, Vista, Envoy and Aria models
- Tri-X filters can be installed in ALL hot spring models (Even older models)
- Tri-X filters have a life expectancy of up to 5 years.
- Because filters can become clogged with body oils, they should be chemically cleaned every 3-4 months using “Brilliance Filter Cleaner.”
- You can put the tri-x filters in the dishwasher, but we do not suggest this as the *only* method of cleaning them. If you choose to occasionally clean your filters this way, please make sure there is no detergent in the water, no rinse agent present and that your dishwasher is not on the dry cycle.
- If you are using BaquaSpa chemicals, you must soak your Tri-X Filters in the BaquaSpa filter cleaner. We suggest soaking them over night *at least* every 3 months. Do not put your filters in the dishwasher if you are using BaquaSpa

Removal

1. Turn off power to tub.
2. Remove the filter lid.
3. Remove any debris from the filter compartment. (This is important because if debris finds it's way into internal plumbing, blockage could result).
4. Unscrew the filter retainer (located on the top of the filter standpipe).
Caution: Do not remove the filter standpipe while removing the retainer. If the standpipe is inadvertently unscrewed while removing the filter retainer, immediately separate the two components and reinstall the standpipe. The spa must never be operated without the standpipe in place.
5. Remove the filters.
6. To reinstall the filters, reverse steps 1 to 4.
Caution: Do not over-tighten filter retainer! Over tightening of the filter retainer will result in removal of the filter standpipe during the next filter removal.

If you have further questions, don't hesitate to call your local Spring Dance store:
